

Moocow Unicycles – Bambooni

Letter to Bambooni

To the organizers and sponsors of Bambooni:

To start this letter I want to offer a sincere thank you. I fully support this initiative, love the idea of open source, and am a huge fan of the goal of making unicycling more sustainable. This was the first crowdfunding campaign I've ever donated to, and I'm thrilled to see it succeed! So thank you all for the time and effort to bring this together.

Working on this project has been a learning experience and a pleasure. The design after a week of use has proven itself capable of virtually any style of riding. The supports for the neck do diminish from freestyle riding as it limits the ability to coast, but in general it is a solid all around frame.

The submission package for this project includes STEP files for the design submitted, as well as an optimized design, and assembly fixture. STEP files were provided to ensure compatibility with various CAD software's. If other file formats are preferred please contact me directly. Please note that the original files were designed in Solidworks 2016, and sldprt files can be provided if requested.

Again, thanks to everyone involved in this project. Special thanks to Jamie Arredondo for his devotion and passion towards this project. Bambooni has been an absolute pleasure to work on, and I'm grateful to see it come to fruition.

-David Moscoe
